

**AGENDA**

**Joint Meeting of the Academic Standards & Assessments  
& Public Awareness Subcommittees**

Monday, January 25, 2021  
Blatt Building, Room 110  
10:00 A.M.

I. Welcome .....Neil Robinson

II. Approval of Minutes from the November 16, 2020 ASA Subcommittee Meeting

Subcommittee Report:

*Information Item:*

Cyclical Review of SC’s Accountability System:  
Accountability Framework Report.....C. Matthew Ferguson

III. Adjournment

Academic Standards and Assessments

Neil Robinson, Vice Chair  
Barbara Hairfield  
Sen. Greg Hembree  
Sidney Locke  
Patti Tate  
Dr. Scott Turner

**SOUTH CAROLINA EDUCATION OVERSIGHT  
ACADEMIC STANDARDS AND ASSESSMENTS (ASA) SUBCOMMITTEE**

Minutes of the Meeting  
November 16, 2020

**Members present:** ; Neil Robinson; Barbara Hairfield; Patti Tate; and Sen. Greg Hembree (Virtual)

**EOC staff present:** Matthew Ferguson; Dr. Kevin Andrews; Dr. Valerie Harrison; Dr. Rainey Knight; Dana Yow; Diane Sigmon

**Others Present:** Angel Malone, Career Technology Education (CTE) Director, SCDE

Mr. Robinson welcomed everyone to the meeting, also chaired the meeting. The minutes from the September 14, 2020 Academic Standards and Assessments (ASA)/ Public Awareness Subcommittees Joint meeting were approved by a motion from Ms. Hairfield and seconded by Ms. Tate

Action Item

Dr. Knight presented the Cyclical Review of SC College and Career Ready Standards English Language Arts Standards(ELA) for approval. Per EOC statutory responsibility, the review is conducted at least every seven years; the last English language arts cyclical review was completed in 2014. A national panel made up of five experts in reading/English language arts were secured to review the standards and provide suggested revisions. The state panel, 24 members, included parents, English language arts teachers, exceptional education teachers. English language learners, community members and representatives from business. Both panels used the same criteria to review the standards: 1) Comprehensiveness; 2) Rigor; 3) Measurability;3) Manageability; and 4) Organization/Communication. The 2020 ELA Cyclical Review process began with Zoom sessions in the spring with findings provided in August of 2020. Dr. Knight provided a review of South Carolina student performance in English Language Arts per 2019 ELA SC Ready(Percentage of students at Met or Above); and 2019 End of Course English I( percentage of Students with a grade of C or Better); 2016-2019 ELA SC Ready (Percentage of Students Scoring Does Not Meet); and Act 284, Read to Succeed implementation details. She noted that assessment results in reading and ELA show student performance is stalled and lack of improvement despite significant investment.

Commendations by National and State 2020 ELA Cyclical Review Panels were presented:

1. Standards address essential content and skills.
2. Attempt to focus on diversity using terms such as multiple perspectives and alternative views.
3. Majority of standards require students to demonstrate higher levels of learning on Revised Blooms Taxonomy.
4. Standards appear to be consistent in style and formatting.

Dr Knight then presented the following EOC 2020 ELA Cyclical Review Recommendations:

1. Include grade specific benchmarks for determining text complexity, such as Lexile range, as well as exemplar texts in an appendix that are consistent with the demand and expectations for each grade level.
2. Consider a reorganization of the standards. This reorganization would leave five (5) standards strands: Research, Communication, Writing, Fundamentals of Readings, and Reading Applications with a reduction in the number of standards from 41 to 29.

Details provided for this recommendation:

- change the name of one strand: Inquiry to Research.
  - add another strand called Fundamentals of Reading to be comprised of first five standards of Reading for Information and Reading Literary Texts,
  - combine standard 10 in Reading Literary with standard 11 in Reading Information and combine standard 13 in Reading Information with standard 12 in Reading Literary Texts. The Fundamentals of Reading strand would be made up of 7 standards to minimize the repetition that currently exists.
  - combine remaining standards from Reading Information and Reading Literary into new strand Reading Applications into six (6) standards. For these remaining standards, reduce the overlap and combine.
3. An appendix should be provided with specific expectations for student learning to include outlining expectations for phonics and word analysis skills that need to be mastered at each grade level.
  4. Learning progressions would be helpful to teachers and a vertical alignment is needed to provide teachers a clear understanding of their role in building on prior student learning and preparing students for future learning.
  5. Revisions should consider providing guidance for differentiation to English language learners ,honors and special education students.
  6. Units and examples of how to teach the standards should be created for middle and high school teachers, similar to those that have been created for earlier grade levels.
  7. The element of diversity attempts to be part of the standards, however, there needs to be more specific references to perspectives around gender, race and ethnicity.
  8. A copyeditor should be used to ensure the standards document is clear, concise and consistent for teacher-readability as well as the expectations for student learning. Many standards and indicators are written with multiple verbs. It is difficult to separate the activities from the objectives for student learning. Standards and indicators become lengthy and should be more consider for clarity and readability. Often it is difficult to tell what the objective is. For example, "Retell the central idea and identify key details to summarize a text heard, read or viewed." Objective is to "summarize a text, heard, read or viewed, by retelling the central idea and identifying key details."

Ms. Tate stated that she liked the recommendations related to the clarity, conciseness and reducing the number of the standards. Mr. Robinson added that the recommendations are "spot on" but, the key is follow-up regarding their implementation. Ms. Hairfield addressed the need for inclusion of media literacy in ELA standards because of the current increase in remote learning. She noted that many of the recommendations would be included in a support document.

Mr. Robinson inquired about the timeline for sending the EOC ELA Cyclical Review Recommendations to the State Department of Education. Dr. Knight responded that after ASA Subcommittee approval and Full EOC Committee approval, the recommendations will be sent to the State Board of Education in December 2020.

Ms. Tate made a motion to approve the 2020 EOC ELA Cyclical Review Recommendations; the motion was seconded by Ms. Hairfield. The ASA Subcommittee voted to approve the recommendations; and present them to the Full EOC Committee for approval at the December 14, 2020, meeting.

#### Information Items

##### Career Ready Certifications 2020 Update

Ms. Angel H. Malone, Director of Career and Technology Education, South Carolina Department of Education (SDE), provided an update the recommended Industry Recognized Credentials for the 2020-2021 academic year. In summary, there are currently 254 credentials on the approved list from the previous 2019-2020 academic year. The SDE is seeking approval for the deletion of 15 credentials with respective reasoning provided; and the addition of 59 new credentials. Ms. Malone informed the ASA Subcommittee that the credentials presented have been recommended and vetted by Career and Technology Education professionals and representatives from business and industry. The SDE is also currently moving toward the implementation of a stackable credential system during the 21-22 academic year; work on the stackable system was delayed because of COVID related demands on staff, completion of this work is anticipated by March 2021 with presentation for approval to the EOC in April 2021. A 2020-2021 Stackable Industry Recognized Transition Timeline, and Industry Credential Attainment Data were provided to the ASA Subcommittee for information and review.

Ms. Malone emphasized the importance of having aligned credentials with industry, and the positive graduation rates and credential passage rates when this is in place. She also addressed questions posed by ASA Subcommittee members and EOC staff.

Mr. Ferguson inquired about alignment of CATE efforts with state goals, varying class sizes in certain more challenging classes and equity of access to CATE course offerings. Ms. Malone responded that the Local Comprehensive Needs Assessment by region, and partnerships with business and industry help maintain alignment to state goals reasons. Ms. Malone discussed Tier I, II and III Career Technology Course availability options for students, the focus comprehensive regional offerings for students, and the availability of equipment at certain sites. CATE certifications are aligned to the course standards for equity of educational opportunity. She noted that offerings are typically comprehensive for the region and in collaboration with Business and Industry Liaisons. Funding equipment for centers through partner funding with SC Wins and available federal funds and leveraging partnerships with technical centers/regional centers for access to courses and equipment promote equity of opportunity for students.

Ms. Hairfield asked about the alternate certification program for career and technology education teachers. Ms. Malone shared details about the three-year DIRECT program which is similar to the PACE program for regular classroom teachers. This program has been revamped and provides, a set curriculum for each course, professional development, network of support and SDE Education Associate Mentors for all new CTE teachers. In the current virtual environment, foundational training sessions on strategies for teaching CATE courses in the virtual environment are being provided for singleton CATE teachers and mentors.

Mr. Robinson , EOC representative for the EEDA, stated that the goal is to push a credential system that is aligned with industry needs and expectations .He thanked Ms. Malone for her presentation. It was noted that the recommended Industry Recognized Credentials for the 2020-2021 academic year, will be presented for approval at the December Full EOC meeting.

### Academic Recovery Camp Data Summary

Dr. Kevin Andrews informed the group that Act 142, provided funding for Academic Recovery Grants/Camps for 9,400 eligible students with 3,700 students participating in the district-offered program statewide. Prior to the week of November 9, 2020, the EOC had received pre and post assessment data on 886 students. Dr. Andrews explained : 1) the assessments administered for 2020 Academic Recovery Camps were not state assessments and varied by district in some cases; 2) results had to be entered into to the state data base by districts; 3) only 25% of the 3,700 students currently have pre/post assessment results available- caution should be exercised when making inferences about the results analyzed to date; 4) Post-test scores are higher according to available NWEA results . Dr. Andrews informed the ASA Subcommittee that because of the limitations caused by lack of data availability, a more in-depth analysis will be presented later. He noted that the State Department of Education has provided assessment data to the EOC as provided by districts.

Mr. Robinson inquired about the disconnect; he noted that if the EOC cannot get results on which it can rely, how can recommendations for meaningful improvements be made. Dr. Andrews responded the he could not answer the question, because any answer that he would give would be speculation. He emphasized again that the State Department of Education has gone out of its way to provide Academic Recovery Camp pre-post assessment data, to the EOC as required by the legislation. Dr. Andrews explained that per Act 142, only students receiving face to face instruction were eligible for reimbursement. These camps took place in July and August (2020) and were separate from other summer reading programs.

### ACT/SAT Performance Summary, 2020 Graduate Cohort

Dr. Kevin Andrews provided general information about SC 2020 Graduate Cohort Advanced Placement (AP) results. 62% of students scored 3 or higher on an AP examination. As it relates to the percent of students by Race/Ethnicity, taking AP exams in 2020, white students were over-represented (66.5 %), and black students were under-represented (10.5%) as per total student population. AP exam scores of 3 indicate a candidate who is qualified to take college-level courses. Scores of 4 indicate someone who is well qualified and a 5 indicates someone who is extremely well qualified. Colleges and universities often grant class credit and use AP scores of 3 or more to place students in higher course levels.

Dr. Andrews explained ACT and SAT commonalities. Both assessments are self- selected assessments and make predictions about college academic success. Of those SC students who

graduated from high school in 2020, approximately, 76% of the graduating class took the ACT. The average composite score for SC's 2020 Class of public-school students was 18.1 (out of 36 points). SC's performance ranks near the bottom among the 50 states and the District of Columbia. SC is the lowest ranked state in the nation among those who do not test all students.

Of those SC students who graduated from high school in 2020, SAT, 64% of the graduating class took the SAT. The SAT relies on two main components: Evidence Based Reading and Writing (ERW) and Math. South Carolina public school students' overall mean score was 1019 compared with the national public school mean of 1030. SC's mean ERW score was 519 compared to the national mean of 520. The state's Math average score was 499 while national mean was 510. Dr. Andrews noted that the SAT has undergone more substantive change overtime. South Carolina student performance has remained consistent. The percent of students meeting college level benchmarks in all 4 areas and the composite in South Carolina compared to the nation remained low.

Dr. Andrews stated there is reason for concern when looking at the racial and ethnic performance of SC's 2020 Graduating Class, only 2% of Black/African American students met College Readiness Benchmarks in all four content areas on the ACT, English, Math Reading, Science. He noted that the ACT and SAT are different assessments, measure knowledge in different ways, and get different results. The pattern of racial/ethnic subgroup performance of Black/ African American students is striking. Questions about curriculum rigor, teacher qualifications, understanding by students and teachers of learning expectations and how to promote the learning of the knowledge and skills of all students in South Carolina. This is not a high school problem, but a system wide problem.

Mr. Robinson added that these results show the same problems and same results each year. Incremental changes have been made. He noted that not every student has to go to college- that stigma needs to be taken away. Students need to have the opportunity to learn what they are interested in learning.

Mr. Ferguson stated that, South Carolina has a significant proportion of our students aspiring to attend college. Approximately 66% of all ACT-tested seniors in America aspired to postsecondary education. In South Carolina, 61% of all seniors aspired to postsecondary education in 2020. There is great reason for concern when looking at the racial and ethnic achievement gaps among SC's 2020 graduates.

Discussion continued about the performance of SC students on academic assessments. Ms. Hairfield stated so much is placed on ACT testing and that more strategic teaching and rigor is needed. Ms. Tate added that more parental support of student learning and adding more complexity to the reading standards will improve results. Mr. Ferguson commented that we must think more creatively to get students to learn.

There being no further business, the meeting adjourned.

# CYCLICAL REVIEW OF SOUTH CAROLINA'S ACCOUNTABILITY SYSTEM

## *Accountability Framework Report*

DECEMBER 2020

*Prepared by Chris Domaleski and Leslie Keng of the National Center for the Improvement of Educational Assessment for the South Carolina Education Oversight Committee and the South Carolina Department of Education.*

## EXECUTIVE SUMMARY

[Section 59-18-910](#) of the South Carolina Code of Law calls for the Education Oversight Committee (EOC), working with the South Carolina State Board of Education (SBE), and a broad-based group of stakeholders, to conduct a comprehensive cyclical review of the accountability system. One of the key charges for the cyclical review is to consider how the state's accountability system reflects evidence that students have developed the skills and characteristics outlined in the *Profile of the South Carolina Graduate*.

Pursuant to this legislative mandate, the EOC and the South Carolina Department of Education (SCDE) convened the South Carolina Accountability Advisory Committee (AAC), comprised of members who represented the interests and priorities of various educational stakeholders in South Carolina. The EOC and SCDE contracted with the National Center for the Improvement of Educational Assessment (the Center) to facilitate the cyclical review process.

The AAC met a total of seven times from February to December 2020. The primary focus of the AAC's work was to identify educational policy priorities, discuss system design and implementation considerations and constraints, review key elements of the current accountability system, and, if deemed necessary, recommend changes to the accountability system. During the review process, the AAC was encouraged to offer innovative ideas for improving the existing accountability system and not be constrained by prior practices. However, the committee also attended to critical technical and operational considerations to ensure that the accountability system is coherent, defensible, useful, feasible, and compliant with state and federal requirements. What follows is a summary of the AAC's key findings and recommendations.

## GOALS AND DESIGN PRINCIPLES

The design of any accountability system should be guided by explicit goals and intended outcomes. The goals articulate at a high level what the system is intended to accomplish. The AAC devoted a significant amount of time to discuss and refine the goals of the South Carolina accountability system. The following statement represents the committee's consensus with respect to the system's goals.

**The South Carolina accountability system should both reflect and incent:**

- ✓ **Attainment of knowledge, skills, and characteristics that support the components of the *Profile of the South Carolina Graduate*,**
- ✓ **Elimination of access and equity gaps across the state with respect to both academic performance and the broader set of trans-academic skills, and**
- ✓ **Improvement of student learning via dissemination of clear, actionable information to help districts, schools, and families evaluate and improve the effectiveness of their programs.**

Design principles are another set of important guiding decisions to inform the development of the accountability system. If the goals represent the intended destination on a roadmap (i.e., where we would like to go), the design principles serve to establish the nature and manner of the route (i.e., how we get there). Accountability design, however, is always a case of optimization under constraints that requires tradeoffs between several competing priorities. The AAC considered several competing priorities

in accountability design. While there was not consensus, a majority of committee members agreed that the following design principles should be prioritized in the South Carolina accountability system:

1. Most committee members indicated that **changing the model to reflect needed improvements** was a higher priority than minimizing changes to the existing model in order to measure year-to-year change.
2. More committee members agreed that the system's ability **to produce meaningful comparisons within the same year** is more important than allowing flexibility in how schools earn points.
3. More committee members felt that a **simple and streamlined model** is preferred over a more comprehensive model.
4. Committee members felt strongly that South Carolina should have **one accountability system that meets all federal and state requirements** instead of multiple systems to pursue state-specific priorities outside of the constraints of the federal system. Most committee members also agreed that a hybrid system, in which some but not all elements in the system satisfy federal requirements, is also a promising approach. Such a system requires some decision-making about how tightly to couple state and federal requirements.
5. The committee members also strongly preferred that the state **take time to study some components more fully** before determining if/how they should be included in the accountability system over moving quickly to implement any system change recommendations.
6. More committee members felt that the state should **privilege accountability metrics that can be reported quickly** over a broader range of elements that may be more informative.
7. The committee preferred to **collect new types of data, such as performance on trans-academic skills or post-secondary performance**, that can more fully realize the design priorities even if doing so is more time consuming, expensive, and burdensome, especially in the initial years.

The AAC was instructed to ground its subsequent discussions about and recommendations for the South Carolina accountability system components on these agreed-upon goals and design principles.

## COMMITTEE RECOMMENDATIONS

The AAC's recommendations are organized into three categories:

1. Revising the ESSA School Accountability System
2. Enhancing Data Collection and/or Reporting
3. Engaging in Further Research and Development

The first category represents changes to the indicators or design decisions that inform ratings or classifications of schools in the state and federal accountability systems. The second category reflects suggestions for additional information the state should collect and publicly report to help a wide range

of stakeholders (e.g., policymakers, community leaders, educators, and parents) better understand and support school success. The third category represents ideas that the committee feels are promising but will benefit from additional research to determine if or how they might be suitable for implementation. The tables below summarized the committee’s recommendation in each of the categories.

COMMITTEE RECOMMENDATIONS FOR REVISING THE ESSA SCHOOL ACCOUNTABILITY SYSTEM
<p>Develop and report new information related to achievement gaps in academic performance that:</p> <ul style="list-style-type: none"> <li>• Includes all student groups,</li> <li>• Is tied to a fixed and meaningful criterion, and</li> <li>• Measures progress toward elimination of gaps.</li> </ul> <p>Achievement gap measures should be prominently and clearly reported in a manner that is easily accessed and understood by stakeholders. Schools with achievement gaps that are large and persistent should NOT attain favorable ratings.</p>
<p>Evaluate the current school performance ratings to ensure they reflect clear, appropriate, and consistent criteria. This includes the following:</p> <ul style="list-style-type: none"> <li>• Study the range of ‘school profiles’ for each rating level to certify these patterns are appropriate and consistent with the state’s educational goals, especially related to equity,</li> <li>• Revise performance expectations as necessary, and</li> <li>• Clearly communicate the meaning of each rating in terms of the expected performance.</li> </ul>
<p>Consider the following changes to the graduation rate and college and career readiness (CCR) indicators:</p> <ul style="list-style-type: none"> <li>• Evaluate and potentially adjust the weights of graduation rate and the CCR indicators, and</li> <li>• Include extended (5-year) graduation rate, but with the following parameters: <ul style="list-style-type: none"> <li>- Extended graduation rate should have less influence than the traditional 4-year rate to maintain on-time graduation as the primary goal, and</li> <li>- Extended graduation rate alone should not decrease accountability scores.</li> </ul> </li> </ul>
<p>Career-ready credit should be awarded to qualifying students who earn the <a href="#">South Carolina High School Credential</a>. The state should engage in ongoing evaluation and monitoring to ensure that students are not inappropriately routed to this option.</p>

### COMMITTEE RECOMMENDATIONS FOR *ENHANCING DATA COLLECTION AND/OR REPORTING*

The state should conduct ongoing monitoring and evaluation of all career readiness measures to ensure patterns of participation and performance demonstrate that students are well-prepared for post-secondary career success. Evaluation results should be publicly and prominently reported.

The committee supports research, development, and implementation of a reporting initiative to better communicate *Conditions for Success* for South Carolina's districts and schools. This component should include factors such as:

- Educator quality, training, and competencies, including cultural competencies,
- Diversity of educator and leader workforce,
- Rates of disciplinary actions, such as suspension and expulsion, including for early learners,
- Access to resources within the community (e.g., mentoring programs, parent engagement, corporate partnerships), and
- Data to inform readiness and capacity for remote learning such as infrastructure (e.g., device availability, connectivity) and training.

### COMMITTEE RECOMMENDATIONS FOR *ENGAGING IN FURTHER RESEARCH AND DEVELOPMENT*

Research alternatives for developing academic and trans-academic measures for students in kindergarten to grade 2.

Consider developing state guidance and standards for performance demonstration (e.g., capstone projects, service initiatives, research studies) for South Carolina high school students.

Evaluate alternatives for through-course assessment.

Assess whether the criteria for student progress, for both the academic content areas and English language proficiency, are appropriate.

Social sciences, especially citizenship, is not adequately addressed. Consider additional measures, perhaps for each grade.

The full report to follow includes a comprehensive description of the cyclical review process for the South Carolina accountability system, including committee membership, topics discussed at each AAC meeting, research considered by the committee, and rationale for the committee's recommendations.

# INTRODUCTION

South Carolina legislation calls for the Education Oversight Committee (EOC), working with the South Carolina State Board of Education (SBE), and a broad-based group of stakeholders, to conduct a comprehensive cyclical review of the accountability system. Specifically, [Section 59-18-910](#) of the South Carolina Code of Law states:

Beginning in 2020, the Education Oversight Committee, working with the State Board of Education and a broad based group of stakeholders, selected by the Education Oversight Committee, shall conduct a comprehensive cyclical review of the accountability system at least every five years and shall provide the General Assembly with a report on the findings and recommended actions to improve the accountability system and to accelerate improvements in student and school performance. The stakeholders must include the State Superintendent of Education and the Governor, or the Governor’s designee. The other stakeholders include, but are not limited to, parents, business and industry persons, community leaders, and educators. The cyclical review must include recommendations of a process for determining if students are graduating with the world class skills and life and career characteristics of the Profile of the South Carolina Graduate to be successful in postsecondary education and in careers. The accountability system needs to reflect evidence that students have developed these skills and characteristics.

One of the key charges for the cyclical review is to consider how the state’s accountability system reflects evidence that students have developed the skills and characteristics outlined in the *Profile of the South Carolina Graduate*. Figure 1 below is a visual summary of the knowledge, skills, and characteristics in the *Profile of the South Carolina Graduate*.

Pursuant to this legislative mandate, the EOC and the South Carolina Department of Education (SCDE) contracted with the National Center for the Improvement of Educational Assessment (the Center) in January 2020 to support the cyclical review process. This report is a summary of the process. It includes a description of the Accountability Advisory Committee (AAC), the goals and design priorities agreed upon by the AAC, the AAC’s suggestions for components of the accountability system, and recommendations by the AAC. As required by the legislation, the intended audience of this report is the South Carolina General Assembly.

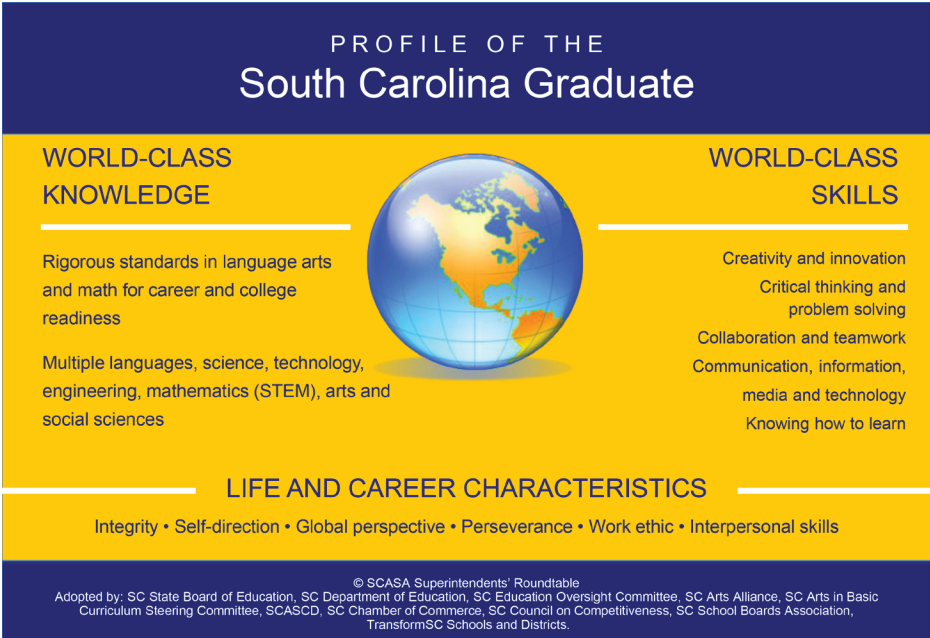

Figure 1: Profile of the South Carolina Graduate.

## SOUTH CAROLINA ACCOUNTABILITY ADVISORY COMMITTEE

This section describes how the South Carolina Accountability Advisory Committee (AAC) was constituted and chronicles the process that the committee went through to evaluate the current accountability system and make its recommendations.

### COMMITTEE COMPOSITION

The EOC and the SCDE worked with the Center to assemble the AAC. According to the membership requirements specified in Section 59-18-910, the committee should include members that represent the interests and priorities of various educational stakeholders in South Carolina. Based on its experience working with similar committees in other states, the Center suggested a committee size of about 10-15 members from state leadership, schools, districts, advocacy groups, and the broader community. Table 1 shows the committee that the SCDE and the EOC put together based on these criteria. The [Appendix](#) shows the attendance of the committee members at the meetings and webinars throughout 2020.

**Table 1: 2020 South Carolina Accountability Advisory Committee Membership**

COMMITTEE MEMBER	GROUP REPRESENTATION
Molly Spearman	State Superintendent
Melanie Barton	Governor or designee
Cynthia Downs	State Board of Education
Brian Newsome	EOC, principal, parent
Jessica Jackson	Business representative (Boeing)
James Burton	Business representative (Continental Tires)
Jo Anne Anderson	Community member
J.T. McLawhorn	Community member
Chandra Jefferson	Educator: classroom teacher
Neil Vincent	Educator: district superintendent
Sandy Brossard	Educator: district instructional leader
Takesha Pollock	Parent
Ian Feigel	Parent
Wanda Hassler	Local school board member (Darlington County)
Hope Rivers	Higher education representative
Georgia Mjartan	Early childhood education representative

# ROLE OF THE COMMITTEE

The AAC’s purpose was to work with the EOC and the SCDE to help state leaders make good decisions about the design and implementation of school accountability. With that purpose in mind, the primary focus of the AAC was to identify educational policy priorities, discuss system design and implementation considerations and constraints, review key elements of the current accountability system, and, if deemed necessary, recommend changes to the accountability system. During the review process, the AAC was encouraged to offer innovative ideas for improving the existing accountability system and not be constrained by prior practices. However, the committee also attended to critical technical and operational considerations to ensure that the framework is coherent, defensible, useful, feasible, and compliant with state and federal requirements.

The original plan shared with the AAC included five meetings during 2020 with three all-day in-person meetings and two virtual webinars. Because of the COVID-19 pandemic, however, in-person gatherings were not ideal for most of 2020. Consequently, the all-day in-person meetings were re-purposed as shorter virtual webinars with more focused discussion topics. Table 2 summarizes the dates and topics addressed at each AAC meeting.

**Table 2: Summary of 2020 AAC Meetings**

MEETING	DATE	TOPICS ADDRESSED
AAC Meeting #1 (in-person)	Feb 24, 2020	<ul style="list-style-type: none"> <li>• Overview of current accountability system and design principles,</li> <li>• Initial discussion of goals and priorities of the system,</li> <li>• Evaluation of what components of the system are working well and what components are not working as intended.</li> </ul>
AAC Meeting #2 (virtual)	May 5, 2020	<ul style="list-style-type: none"> <li>• Articulation of goals of the accountability system,</li> <li>• Mapping of elements of the <i>Profile of a South Carolina Graduate</i> to components of the current system,</li> <li>• Discussion of options for the school quality or student success (SQSS) indicator.</li> </ul>
AAC Meeting #3 (hybrid)	July 28, 2020	<ul style="list-style-type: none"> <li>• Articulation of design principles and priorities for the accountability system,</li> <li>• Examination of system components and determination of which components should be preserved and which should be changed,</li> <li>• Discussion of analysis and/or research to inform recommendations.</li> </ul>
AAC Meeting #4 (virtual)	Oct 27, 2020	<ul style="list-style-type: none"> <li>• Review of <i>The Future of SC’s Accountability System</i> stakeholder survey results,</li> <li>• Review of initial set of committee recommendations based on discussions at previous meetings,</li> <li>• Focused discussion on the committee’s recommendations for eliminating achievement gap.</li> </ul>

MEETING	DATE	TOPICS ADDRESSED
AAC Meeting #5 (virtual)	Nov 9, 2020	<ul style="list-style-type: none"> <li>• Affirmation of committee’s recommendations on eliminating achievement gaps and evaluating performance expectations,</li> <li>• Focused discussion on the committee’s recommendations for extended graduation rate and career readiness criteria,</li> <li>• Initial brainstorming of ideas for “conditions for success” measures.</li> </ul>
AAC Meeting #6 (virtual)	Dec 10, 2020	<ul style="list-style-type: none"> <li>• Committee feedback on partial draft of the South Carolina <i>Accountability Framework Report</i> (i.e., this document),</li> <li>• Affirmation of committee’s recommendations on extended graduation rate and high school credential,</li> <li>• Focused discussion on career readiness criteria, particularly with respect to military readiness,</li> <li>• Focused discussion on recommendation for “conditions for success” measures,</li> <li>• Brainstorm of ideas to frame recommendation for engagement,</li> <li>• Review of the committee’s recommendations for research and development.</li> </ul>
AAC Meeting #7 (virtual)	Dec 16, 2020	<ul style="list-style-type: none"> <li>• Committee feedback on complete draft of the South Carolina <i>Accountability Framework Report</i> (i.e., this document),</li> <li>• Resolution of gaps and/or points of disagreement,</li> <li>• Affirmation of the committee’s findings and recommendations.</li> </ul>

## GOALS AND DESIGN PRINCIPLES

### Goals

The design of any accountability system should be guided by explicit goals and intended outcomes. The goals articulate at a high level what the system is intended to accomplish. Clear goal statements serve to direct and help prioritize design decisions about the system. The AAC devoted a significant amount of time during its first and second meetings to discuss and refine the goals of the South Carolina accountability system. The following statement represents the committee’s consensus with respect to the system’s goals.

**The South Carolina accountability system should both reflect and incent:**

- **Attainment of knowledge, skills, and characteristics that support the components of the *Profile of the South Carolina Graduate*,**  
South Carolina’s vision for its education system is encapsulated in the *Profile of the South*

*Carolina Graduate* (the Profile). The Profile serves as the guiding framework that motivated and informed the committee’s discussion. The committee emphasized the importance of ensuring the state accountability system is tied to college and career readiness as expressed in the Profile. The committee also recognized that the current system may not be sufficiently broad to capture all Profile components, especially measures of world-class skills and life and career characteristics and the various pathways to success.

- **Elimination of access and equity gaps across the state with respect to both academic performance and the broader set of trans-academic skills, and**

The committee’s concerns and commitment to promoting equity with the accountability system cannot be overstated. This was brought into greater focus by the COVID-19 pandemic, which was ongoing during the cyclical review process. Several committee members expressed concerns about how the COVID-19 school disruptions would highlight and likely further exacerbate the digital divide and achievement gaps. The need for the accountability system to identify and signal gaps in access and equity in the state for various student groups is more critical and prevalent than ever.

- **Improvement of student learning via dissemination of clear, actionable information to help districts, schools, and families evaluate and improve the effectiveness of their programs.**

The committee acknowledged that outcomes from the accountability system are only helpful if they are clearly understood, accurately interpreted, and appropriately acted on by the educational stakeholders that the system is intended to serve. The committee also recognized accountability reporting and supports as a key area for improvement with the current system. The committee discussed strategies such as enhancing the scope, clarity, and utility of information provided to stakeholders, exploring reports for indicators that provide more ‘along-the-way’ information about risk factors earlier, and considering how the state can facilitate the sharing of promising practices for school improvement.

When asked about key words that committee members felt should be associated with the goals of the South Carolina accountability system, the most prominent ones were equitable, attainable, and actionable (see Figure 2).

Figure 2: Key words that the AAC associated with the accountability system

## Design Principles

Design principles are another set of important guiding decisions to inform the development of the accountability system. If the goals represent the intended destination on a roadmap (i.e., where we would like to go), the design principles serve to establish the nature and manner of the route (i.e., how we get there). Design principles can also serve as a basis for evaluating whether the system is working as intended. Accountability design, however, is always a case of optimization under constraints that requires tradeoffs between several competing priorities. During its third meeting, the AAC considered seven pairs of competing priorities in accountability design. The competing priorities were:

1. Change vs. Comparing Over Time
2. Flexibility vs. Within Year Comparison
3. Simplicity vs. Comprehensiveness
4. Single System vs. Multiple Systems (vs. Hybrid System)
5. Implementation – Right vs. Right Now
6. Reporting – Efficiency vs. Efficacy
7. New Information vs. Minimizing Burden

A short document explaining the tradeoffs associated with each pair of competing priorities was shared with committee members as part of the advanced reading materials. Committee members were polled about their preference for each tradeoff and were invited to share their perspectives. While there was not consensus, more committee members agreed that the following design principles should be prioritized in the South Carolina accountability system:

1. Most committee members indicated that ***changing the model to reflect needed improvements*** was a higher priority than minimizing changes to the existing model in order to measure year-to-year change.
2. More committee members agreed that the system's ability ***to produce meaningful comparisons within the same year*** is more important than allowing flexibility in how schools earn points.
3. More committee members felt that a ***simple and streamlined model*** is preferred over a more comprehensive model.
4. Committee members felt strongly that South Carolina should have ***one accountability system that meets all federal and state requirements*** instead of multiple systems to pursue state-specific priorities outside of the constraints of the federal system. Most committee members also agreed that a hybrid system, in which some but not all elements in the system satisfy federal requirements, is also a promising approach. Such a system requires some decision-making about how tightly to couple state and federal requirements.
5. The committee members also strongly preferred that the state ***take time to study some components more fully*** before determining if/how they should be included in the accountability system over moving quickly to implement any system change recommendations.
6. More committee members felt that the state should ***privilege accountability metrics that can be reported quickly*** over a broader range of elements that may be more informative.

7. The committee preferred to **collect new types of data, such as performance on trans-academic skills or post-secondary performance**, that can more fully realize the design priorities even if doing so is more time consuming, expensive, and burdensome, especially in the initial years.

The AAC was instructed to ground its subsequent discussions about and recommendations for the South Carolina accountability system components on the goals and design principles summarized in this section.

## SYSTEM COMPONENTS

Once the goals and design principles for South Carolina accountability system were established, the AAC took a closer look at the components of the system. The current system, as described in detail in South Carolina's [approved plan for the Every Student Succeeds Act \(ESSA\)](#), includes the following accountability indicators and associated point allocation in the overall school rating.

### Elementary and Middle School

- Academic Achievement = 35 points with ELP; 40 points without ELP
- Student Progress = 35 points with ELP; 40 points without ELP
- Progress in Achieving English Language Proficiency (ELP) = 10 points, if English learner n-size  $\geq 20$
- School Quality or Student Success (SQSS)
  - Preparing for Success (Science) = 10 points
  - Positive and Effective Learning Environment = 10 points

### High School

- Academic Achievement = 25 points with ELP; 30 points without ELP
- Graduation Rate = 25 points with ELP; 30 points without ELP
- Progress in Achieving English Language Proficiency (ELP) = 10 points, if English learner n-size  $\geq 20$
- School Quality or Student Success (SQSS)
  - Preparing for Success (Biology and U.S. History) = 10 points
  - College and Career Readiness = 25 points
  - Positive and Effective Learning Environment = 5 points

Each school receives an overall score out of 100 possible points and is assigned one of five ratings: Excellent, Good, Average, Below Average, or Unsatisfactory. The school is also assigned separate ratings, based on the same five performance categories, for each indicator. The school's performance is reported for all students and for each subgroup with enough students (i.e., n-size  $\geq 20$ ).

# RELATIONSHIP TO PROFILE OF THE SOUTH CAROLINA GRADUATE

One of the key charges for the committee is to examine the extent to which the state’s accountability system reflects the skills and characteristics outlined in the *Profile of the South Carolina Graduate* (or the Profile). To support this review, the Center facilitators generated crosswalks between the elements of the Profile and current accountability system components. Tables 3 and 4 show the crosswalks organized by the key areas of the Profile: World Class Knowledge, World Class Skills, and Life and Career Characteristics.

**Table 3: Profile-Accountability System Crosswalk: World Class Knowledge**

PROFILE OF THE SOUTH CAROLINA GRADUATE	SOUTH CAROLINA ACCOUNTABILITY SYSTEM
Rigorous standards in language arts and math for career and college readiness	Academic Achievement Indicator: <ul style="list-style-type: none"> <li>Grades 3-8: Results on SC Ready in 3-8 ELA and Mathematics</li> <li>High School: End-of-course assessments in Algebra I and English I/II</li> </ul>
Multiple languages, science, technology, engineering, mathematics (STEM), arts and social sciences	Student Progress Indicator (for Grades 3-8): <ul style="list-style-type: none"> <li>Value-added growth measuring gains of students in ELA and Mathematics</li> </ul>
	Preparing for Success Indicator: <ul style="list-style-type: none"> <li>Grades 3-8: SC Ready assessment in science grades 4 and 6</li> <li>High School: End-of-course assessments in Biology and U.S. History</li> </ul>

**Table 4: Profile-Accountability System Crosswalk: World Class Skills, Life and Career Characteristics**

PROFILE OF THE SOUTH CAROLINA GRADUATE	SOUTH CAROLINA ACCOUNTABILITY SYSTEM
World Class Skills <ul style="list-style-type: none"> <li>Creativity and Innovation</li> <li>Critical Thinking and Problem Solving</li> <li>Collaboration and Teamwork</li> <li>Communication, information, media and technology, knowing how to learn</li> </ul>	Indirectly addressed via: <ul style="list-style-type: none"> <li>Student Engagement (All Schools)</li> <li>Graduation Rate (High Schools)</li> <li>College Ready (High Schools)</li> <li>Qualifying performance on ACT, SAT, AP, IB or dual enrollment</li> </ul>
Life and Career Characteristics <ul style="list-style-type: none"> <li>Integrity</li> <li>Self-Direction</li> <li>Global Perspective</li> <li>Perseverance</li> <li>Work Ethic</li> <li>Interpersonal Skills</li> </ul>	Career Ready (HS): <ul style="list-style-type: none"> <li>Career and Technical Education (CTE) completer with earned credential, qualifying score on career readiness assessment or Armed Services Vocational Aptitude Battery (ASVAB), complete work-based learning program</li> </ul>

The Center also identified components of the current accountability system that are reported, but not factored into a school's annual rating, that can inform the skills and characteristics in the Profile. These components include:

- Percentage of students passing the Civics test,
- Participation and passage rates for advanced courses,
- College applications, college enrollment, and FAFSA completions,
- LIFE and Palmetto Fellow Scholarship information,
- Average ACT and SAT scores,
- Dual enrollment/credit success rate and,
- CTE enrollment and work-based learning.

Finally, the Center conducted a scan of college and career readiness (CCR) measures and SQSS indicators in other states and summarized its findings with the committee. The key findings included:

- Most states have expanded the range of CCR indicators to include advanced coursework and select career ready credentials.
- Few states have explored SQSS options other than 1) additional academic indicators and 2) attendance or absenteeism.
  - Infrequently, we find examples of surveys and participation in enrichment activities or courses.
  - We find no states that have incorporated formal, direct measures of trans-academic skills. Some indirect measures may be found in indicators such as service or co/extra-curricular activities.
- ***Compared to other states, South Carolina's system stands among the more broad and innovative state accountability models.***

## REVIEW OF ACCOUNTABILITY SYSTEM COMPONENTS

The AAC reviewed and provided recommendations on the system components during its third meeting. For discussion purposes, the accountability system components were grouped into three main categories: academic indicators, readiness measures, and trans-academic measures. For each category of system components, the committee members noted recommendations for additions or changes to the current approach. They also identified priorities for additional research. Their feedback was used to craft the recommendations presented in the next section.

## COMMITTEE RECOMMENDATIONS

The section summarizes the key recommendations by the AAC. These recommendations represent the priorities expressed by committee members during the first three meetings, then expounded on and confirmed by the committee in the remaining webinars. The recommendations are organized into three categories:

1. Revising the ESSA School Accountability System
2. Enhancing Data Collection and/or Reporting
3. Engaging in Further Research and Development

The first category represents changes to the indicators or design decisions that inform ratings or classifications of schools in the state and federal accountability systems. The second category reflects suggestions for additional information the state should collect and publicly report to help a wide range of stakeholders (e.g., policymakers, community leaders, educators, and parents) better understand and support school success. The third category represents ideas that the committee feels are promising but will benefit from additional research to determine if or how they might be suitable for implementation.

## REVISING THE ESSA SCHOOL ACCOUNTABILITY SYSTEM

### ***Recommendation #1***

Develop and report new information related to achievement gaps in academic performance that:

- Includes all student groups,
- Is tied to a fixed and meaningful criterion, and
- Measures progress toward elimination of gaps.

Achievement gap measures should influence school ratings in addition to being prominently and clearly reported in a manner that is easily accessed and understood by stakeholders. Schools with achievement gaps that are large and persistent should NOT attain favorable ratings.

### **Rationale**

The AAC identified “elimination of access and equity gaps” as a central goal for the school accountability system. While the current system includes indicators that address this goal, such as student progress for the lowest 20% at each school, the current approach may not be sufficiently transparent and influential.

### ***Recommendation #2***

Evaluate the current school performance ratings to ensure they reflect clear, appropriate, and consistent criteria. This includes the following:

- Study the range of ‘school profiles’ for each rating level to certify these patterns are appropriate and consistent with the state’s educational goals, especially related to equity,
- Revise performance expectations as necessary, and
- Clearly communicate the meaning of each rating in terms of the expected performance

## Rationale

School ratings are important signals to stakeholders about performance that is valued and the outcomes we want South Carolina students to attain. The meaning and interpretation of each rating should reflect these values in a manner that is clear, consistent, and supported by evidence.

### ***Recommendation #3***

Consider the following changes to the graduation rate and college and career readiness (CCR) indicators:

- Evaluate and potentially adjust the weights of graduation rate and the CCR indicators, and
- Include extended (5-year) graduation rate, but with the following parameters:
  - Extended graduation rate should have less influence than the traditional 4-year rate to maintain on-time graduation as the primary goal, and
  - Extended graduation rate alone should not decrease accountability scores.

## Rationale

High school graduation and readiness for college and career is a central goal and should be heavily incentivized in the state's school accountability model. Including extended graduation rate will further support the equity and college-career readiness priorities articulated by the AAC. That is, it sends the message that different educational pathways are allowable for different students, such as students with disabilities and English learners, who often need more than four years to graduate from high school due to their specific needs or circumstances.

### ***Recommendation #4***

Career-ready credit should be awarded to qualifying students who earn the [South Carolina High School Credential](#). The state should engage in ongoing evaluation and monitoring to ensure that students are not inappropriately routed to this option.

## Rationale

The accountability system should honor the accomplishments of students with disabilities who have met the state's standards for demonstrating employability skills and career readiness.

## ENHANCING DATA COLLECTION AND REPORTING

### ***Recommendation #5***

The state should conduct ongoing monitoring and evaluation of all career readiness measures to ensure patterns of participation and performance demonstrate that students are well-prepared for post-secondary career success. Evaluation results should be publicly and prominently reported.

## Rationale

The committee discussed at length the career readiness criterion related to military readiness currently operationalized as earning a qualifying score on the Armed Services Vocational Aptitude Battery (ASVAB). Some members of the committee expressed concern that the ASVAB qualification criterion may not reflect the appropriate level of rigor. In particular, "are students using ASVAB as a means to

circumvent other career criteria?" Another critique was that the ASVAB was not a suitable measure for the accountability system, as this assessment addresses factors outside of a school's influence. To be clear, all members of the committee expressed a desire to honor military service. The committee's interest was in ensuring the criteria were appropriate and not working against other system goals.

To better understand this issue, the SCDE provided data analyses revealing that fewer than 2% of students demonstrate career readiness based on ASVAB alone (1.2% of the full cohort; 1.65% of career-ready students). Moreover, there were no districts with unusually high rates of identification based on ASVAB alone. These analyses represent the types of monitoring and evaluation that should be regularly conducted and reported.

The committee also discussed whether it would be prudent to combine ASVAB performance with another criterion, such as completing a military course pathway. Ultimately this idea was not endorsed for a number of reasons, not least was the unequal access to the Junior Reserve Officers' Training Corps (JROTC) courses. While the committee decided to refrain from making a recommendation related to military readiness, this was not a unanimous decision. A minority of committee members expressed a preference for adjusting or removing the ASVAB criteria.

Although the committee did not discuss any of the other career readiness measures, the insights gained via the inquiry into military readiness shaped this recommendation. Specifically, the accountability model will be strengthened by ongoing monitoring, evaluation, and public reporting of all career readiness measures.

### ***Recommendation #6***

The committee supports research, development, and implementation of a reporting initiative to better communicate *Conditions for Success* for South Carolina's districts and schools. This component should include factors such as:

- Educator quality, training, and competencies, including cultural competencies,
- Diversity of educator and leader workforce,
- Rates of disciplinary actions, such as suspension and expulsion, including for early learners,
- Access to resources within the community (e.g., mentoring programs, parent engagement, corporate partnerships), and
- Data to inform readiness and capacity for remote learning such as infrastructure (e.g., device availability, connectivity) and training.

The *Conditions for Success* indicator should be reported in a clear and accessible manner and include, whenever feasible, breakdowns for districts, schools, and student groups. Draft report templates or mock-ups should be vetted with stakeholders to help ensure information is clear and complete.

The *Conditions for Success* indicator will likely include both standardized metrics and information to be customized for districts and schools to reflect the unique communities and initiatives across South Carolina schools. Because the committee was clear that this component should not be used to rate schools or support causal inferences, this recommendation does not work against the design goal of providing standardized comparable data used to inform school ratings.

## Rationale

The AAC identified “elimination of access and equity gaps” as a central goal for the school accountability system. Understanding and addressing conditions for success is vital to achieving this goal. Data from this indicator will also help support the AAC’s goal to produce clear, actionable information to support schools.

## ENGAGING IN FURTHER RESEARCH AND DEVELOPMENT

Finally, the committee developed a number of recommendations for further research and development. These recommendations, presented in Table 5, reflect priorities of the committee and potentially promising new directions. However, the ideas will benefit from additional examination to more fully explore the range of alternatives and the potential benefits or unintended consequences.

**Table 5: Recommendations for Ongoing Research and Development**

RECOMMENDATION	RATIONALE
Research alternatives for developing academic and trans-academic measures for students in K-2.	There is currently an ‘information gap’ prior to grade three. Additional information will help educators better understand and support student success for early learners.
Consider developing state guidance and standards for performance demonstrations (e.g., capstone projects, service initiatives, research studies) for South Carolina high school students.	Many of the world class skills and life and career characteristics prominent in the <i>Profile of the South Carolina Graduate</i> are not adequately cultivated and measured. A performance demonstration could help students demonstrate a range of these critical trans-academic skills in an area of interest to the student associated with his or her post-secondary goals.
Evaluate alternatives for through-course assessment.	End-of-year summative assessments do not provide sufficient or timely information to inform instruction. Providing measures ‘along-the-way’ may help educators better address student needs throughout the year and could potentially leveraged to inform summative classifications.
Assess whether the criteria for student progress, for both the academic content areas and English language proficiency, are appropriate.	While the AAC did not offer recommendations for changes to the progress indicators, they raised questions about whether the criterion for rewarding progress is appropriate. The criterion should be achievable and fair for all students regardless of ‘starting position’ and should be sufficiently rigorous such that students receiving favorable scores are on-track to proficiency in a reasonable amount of time.
Social sciences, especially citizenship, is not adequately addressed. Consider additional measures, perhaps for each grade.	The development and practice of the knowledge and skills necessary to be an engaged citizen in the 21st century has never been more important. More emphasis should be placed on cultivating and measuring these skills in South Carolina schools.

## CONCLUSION

The Accountability Advisory Committee (AAC) conducted a comprehensive review of the South Carolina accountability system in a series of meetings from February to December 2020. The AAC took care to develop clear goal statements, articulate design priorities, and produce recommendations coherent with these foundational principles.

The culminating recommendations are detailed in this report. The recommendations address 1) revisions to the system, 2) reporting enhancements, and 3) priorities for ongoing research. The AAC hopes these recommendations will promote equity, better incentivize, and reflect a wide range of skills associated with the *Profile of the South Carolina Graduate*, and provide more useful information to support student and school improvement.

CYCLICAL REVIEW OF  
SOUTH CAROLINA'S  
ACCOUNTABILITY SYSTEM

*Accountability Framework Report*
